IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Previously Presented) A method for recording content on a record medium that contains a desired content descriptor, comprising the acts of:

reading said desired content descriptor from said record medium;

scanning the content of at least one multimedia source for desired content that matches said desired content descriptor; and

recording said desired content on said record medium, wherein said desired content descriptor is already contained in a blank of said record medium, wherein inserting the record medium containing the desired content descriptor into a recording device triggers the recording device to automatically perform the acts of scanning and

recording.

Claims 2-3 (Canceled)

4.(Previously Presented) The method according to claim 1, wherein said desired content descriptor contained in said record medium cannot be further altered or augmented.

5.(Previously Presented) The method according to claim 1, wherein said desired content descriptor contained in said record medium can be further altered and augmented.

6.(Previously Presented) The method according to claim 1, wherein said desired content descriptor can be transferred from said record medium to a record medium of the same type or to a record medium of a different type.

7.(Previously Presented) The method according to claim 1, wherein said record medium is suited for electric and/or magnetic

and/or optic recording of content.

8. (Previously Presented) The method according to claim 1, wherein said desired content descriptor is a keyword or a list of keywords.

9. (Previously Presented) The method according to claim 1, wherein said desired content descriptor obeys a pre-defined content description format.

10. (Previously Presented) The method according to claim 1, wherein said desired content descriptor comprises multimedia samples.

11. (Previously Presented) The method according to claim 1, wherein said desired content descriptor is a pre-defined content descriptor.

12. (Previously Presented) The method according to claim 1,

wherein said desired content descriptor is defined by the user of said method.

13. (Previously Presented) The method according to claim 1, wherein said content from at least one multimedia source comprises image and/or audio and/or text information.

14. (Previously Presented) The method according to claim 1, wherein said at least one multimedia source is a receiver for television and/or radio programs.

15. (Previously Presented) The method according to claim 1, wherein said at least one multimedia source is a device that is connected to a computer network, in particular to the internet.

16. (Previously Presented) The method according to claim 13, wherein said act of scanning the content of said at least one multimedia source for said desired content comprises image and/or audio and/or word processing.

17. (Previously Presented)   The method according to claim 1, wherein said act of scanning the content of said at least one multimedia source for said desired content is performed dynamically depending on the available amount of content and/or on the already recorded content.

18. (Previously Presented)   A machine-readable medium embodying a computer program, the computer program when executed by a processor is configured to perform the acts of claim 1.

19. (Previously Presented)   A device for recording content on a record medium that contains a desired content descriptor, the device comprising:

means for reading said desired content descriptor from said record medium;

means for scanning the content of at least one multimedia source for desired content that matches said desired content descriptor; and

means for recording said desired content on said record

medium, wherein said desired content descriptor is already

contained in a blank of said record medium, wherein connecting the

record medium containing the desired content descriptor to the

device triggers the scanning means to automatically perform the

scanning and the recording.

20. (Previously Presented) The device according to claim 19,

wherein said means for scanning the content of said at least one

multimedia source for said desired content comprises means for

image and/or audio and/or word processing.

21. (Currently Amended) A record medium comprising a desired

content descriptor and means for reading said desired content

descriptor from said record medium to trigger ~~the~~ scanning of

content of at least one multimedia source for desired content that

matches said desired content descriptor and that is recorded on

said record medium, wherein said desired content descriptor is

already contained in a blank of said record medium wherein the

record medium is configured to trigger a recording device to automatically perform the scanning of the of content and recording the desired content in response to connecting the record medium to the device.

22.(Previously Presented) The record medium of claim 21, wherein said record medium is suited for electric and/or magnetic and/or optic recording of content.
